

What's new in the SysML V2 standard and demonstration of the SysON modeling software

Association Française d'Ingénierie Système | Afterwork Chapitre Rhône-Alpes (CRRA)

June 18th 2024

Florian NOYRIT

Jérémie TATIBOUET

Context

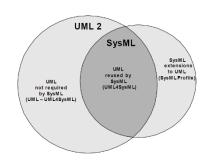

SysML motivation and purpose:

"A general-purpose graphical modeling language for specifying, analyzing, designing, and verifying complex systems that may include hardware, software, information, personnel, procedures, and facilities." (OMG)

SysML Structure Diagram SysML Cross-Cutting Diagram Block Internal Package Parametric Definition Block Diagram Diagram Diagram Diagram Requirement Diagram SysML Behavior Diagram StateMachine Activity Use Case Sequence Diagram Diagram Diagram Diagram

Based on a subset of UML + UML profile :

SysML has evolved to address user and vendor needs:

Initiated by the OMG and the INCOSE in 2003

2007 SysML v1.0

2008 SysML v1.1

2010 SysML

2012 SysML v1.3

2015 SysML

2017 SysML

2019 SysML

SysML v2!

- New needs appeared:
 - INCOSE/OMG/AP233 requirements team.
 - must include precise semantics
 - must provide flexible and rich visualization and reporting capabilities to support a broad range of model users
 - must provide a standard application programming interface
 - INCOSE Systems engineering VISION 2035
 - Full life cycle and from system of systems (SoS) to component level
 - "MBSE Descriptive models created using semantically rich modeling standards provide systems abstraction, data traceability, separation of views, and leverage AI/ML-based reference model reuse at both systems and product realization levels."
- Some issues with SysML v1
 - The UML profile mechanism has limits
 - UML is somewhat software oriented
- It is time for a new SysML version:

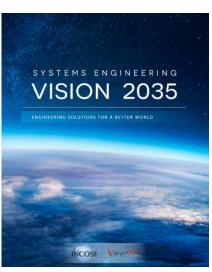

2017 Request for Proposal SysML v2

2017 Charter SysML v2 Submission Team (SST)

2018 Request for Proposal SvsML v2 API & Services

Initial Submission of SysML v2

https://www.incose.org/publications/se-vision-2035

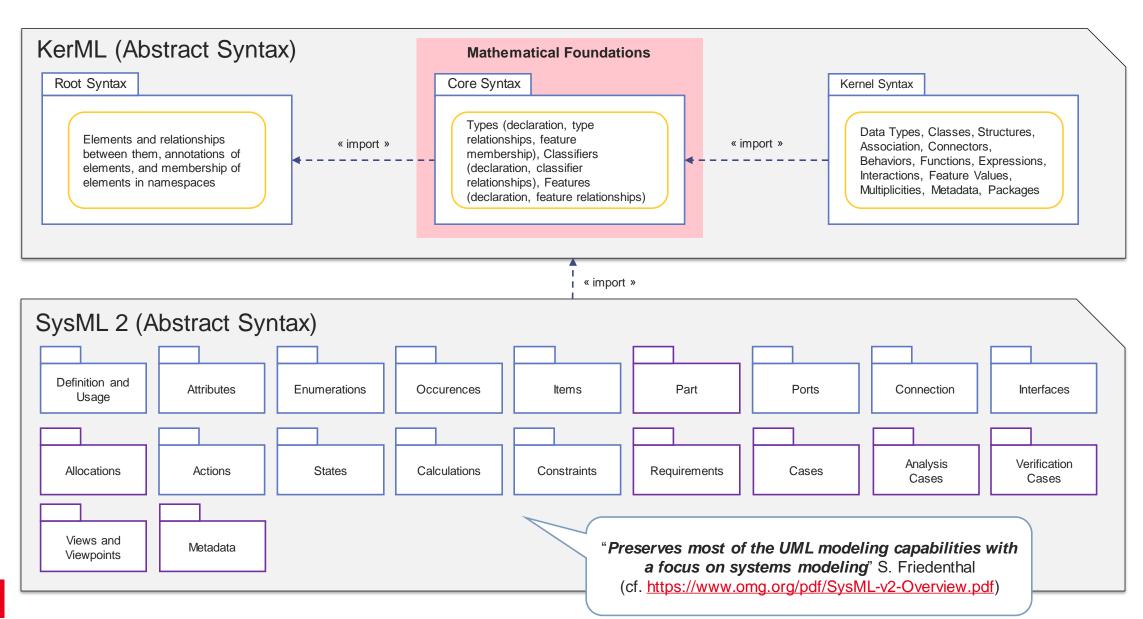

SysML v2 beta 2

Language Architecture

Language Capabilities

Capabilities

Requirements

- Define required / assumed constraints (on existing model properties)
- Define entity on which a requirement is specified: the subject
- Define actors (an external entity) and stakeholders (a person, an organization, a group)

Structure

Behavior

Define a system model behavior with actions, states and interactions

Analysis

Define an analysis to evaluate the impacts of design choices on a system model according to various scenarios

Verification

Define a verification to check the satisfaction of certain requirements on a system model

Methodology

"The language is intended to support multiple system engineering methods and practices. The specific methods and practices may impose additional constraints on how the language is used". (cf., Systems Modeling Language Version 2.0 Beta 2 Part 1 – Clause 1)

Textual & Graphical language

Rich, expressive and human-readable textual syntax

```
RoverExample > 

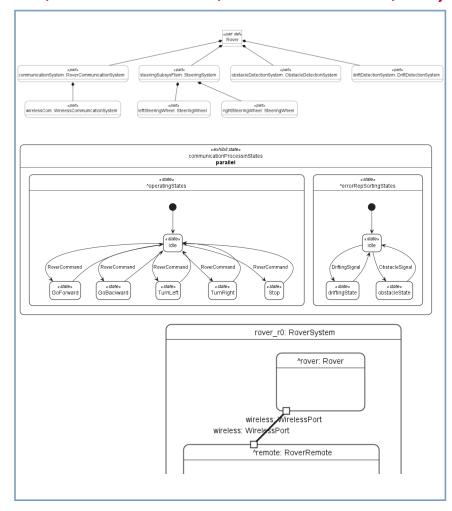

rover.sysml > 

Rover > 

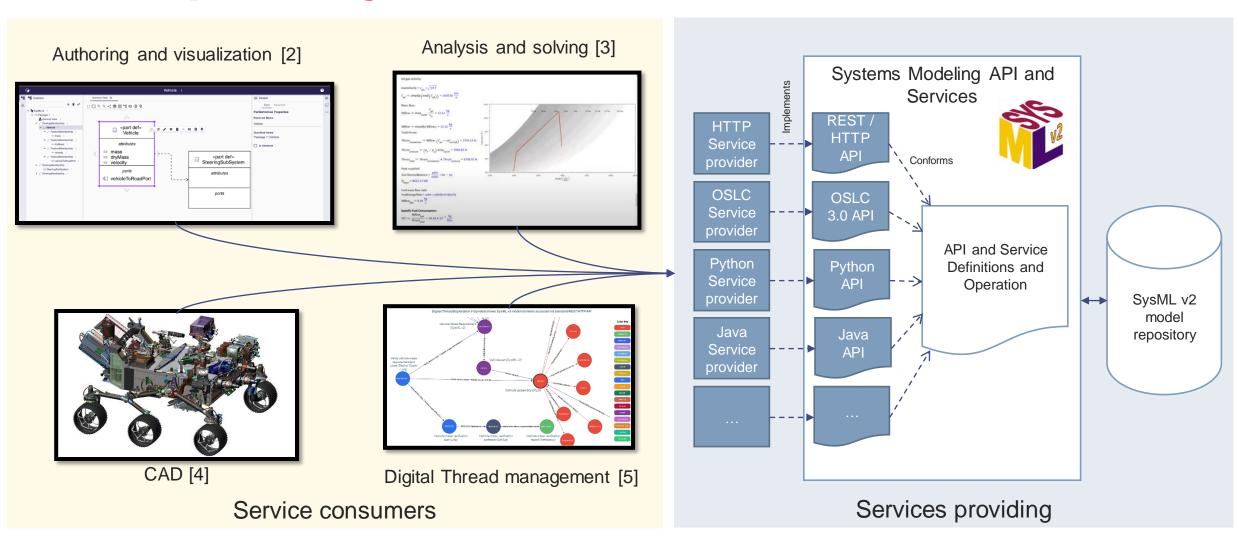

System > 

CommunicationProcessing
     package Rover {
          import SI::'Ω';
          import ISQ::PowerValue;
          import ISQ::ResistanceValue;
         import ISQ::ElectricPotentialValue;
          import Quantities::scalarQuantities;
         import ISQSpaceTime::AngularMeasureValue;
         package Requirements{
             requirement def <ReqDef6> PowerConsumptionRequirement {
                 * Assuming the max consumption greater than 0, the actual consumption shall be less than or equal to the max consumption.
                 attribute actualPowerConsumption : PowerValue;
                 attribute minConsumption : PowerValue;
                 attribute maxConsumption : PowerValue;
                 assume constraint { maxConsumption > 0 [W]
                 assume constraint { minConsumption > 0 [W] }
                 require constraint { actualPowerConsumption <= maxConsumption }</pre>
                  require constraint { actualPowerConsumption >= minConsumption }
              requirement <Req6> roverSteeringPowerConsumptionReq : PowerConsumptionRequirement
                  * Power consuption for the steering of the Rover must be 60W +/- 1%.
```

Multiple graphical views (General, Interconnection, State Transition, etc.)

API and Services Interoperability

SysON (Roadmap)

The tool and the standard (i.e. SysML v2) are still ongoing developments.

2023

Initial release in December

2024

- Releases in January, March and May (2024.5.2)
- See https://github.com/eclipse-syson/syson/packages/2020337/versions

Current status

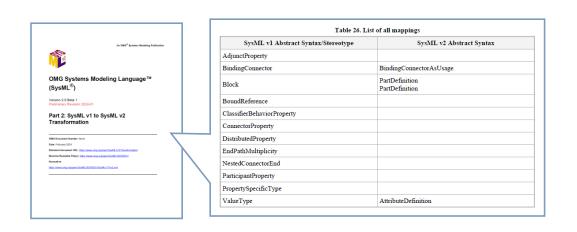

- Full implementation of SysML v2 and KerML metamodels
- Graphical notation : general and interconnection views
- Textual notation
 - Limited to a subset in direct edit capabilities proposed in diagrams
 - Import of models specified with the textual notation
- Demo available at <u>https://www.youtube.com/live/GcRFW0YfFEI?si=Gch</u> <u>7wi5tPaYwzyy&t=2100</u>

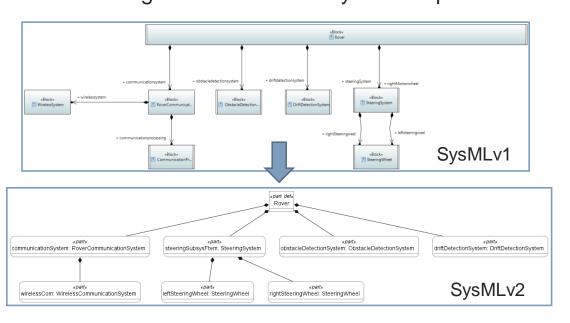

Future works

- Graphical notation support behavioral specifications
 - Action Flow View
 - State Transition View
- Textual notation support
- System Modeling API and Services
 - REST API implementation

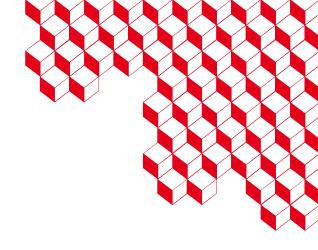

Normative formal (declarative) transformation published along with KerML and SysMLv2 specifications

- Not every construct from UML4SysML and SysML v1 stereotypes match a SysMLv2 construct.
- Generic transformation → Manual and custom refactoring may be required on the transformed model
- SysML v1 to SysML v2 Transition Guide Project [1]
- OMG dedicated Working Group

Thank you for your attention
